# Daniel Mejia Vera

**Web Applications Development Manager** · Full-Stack Engineer & Technical Lead

webmandman@gmail.com  github.com/webmandman

## PROFESSIONAL SUMMARY

Web applications engineering professional with extensive experience architecting, integrating, developing and supporting full-featured, user-friendly, best in-class user experience apps. Experienced in REST API integration, workflow automation, cloud deployment, production troubleshooting, translating business requirements into reliable software, reverse-engineering legacy data structures, and establishing engineering standards. Currently leads two developers while remaining directly responsible for complex implementation work and technical architecture.

## PROFESSIONAL EXPERIENCE

### Psomas

March 2014 - Present

Civil Engineering, Environmental, Surveying & Construction

#### Web Applications Development Manager

January 2023 - Present

Lead a team of two developers while remaining hands-on in full-stack development, architecture, complex implementation, and production support. Establish engineering standards, review code, mentor developers, and translate business requirements into technical solutions in collaboration with end users and company leadership.

SELECTED ENGINEERING ACCOMPLISHMENTS

- **Business planning and reporting:** Architected and developed Business Evolution, an enterprise planning and reporting platform launched in 2022 and continuously enhanced. Supports salary, expense, revenue, and project-sharing plans, along with ongoing actual-versus-budget reporting for more than 228 unique planning and special-access users.
- **Full-stack architecture:** Own the platform's frontend, backend services, business logic, SQL data layer, integrations, and production environment, using React, Telerik UI, BoxLang/ColdBox RESTful services, SQL Server, Redis, and Azure-hosted containers.
- **Legacy system analysis:** Reverse-engineered undocumented Deltek Vision database structures and inherited SQL reports, mapping data relationships and validating results with Accounting and the CFO to deliver reliable reporting.
- **Business process automation:** Automated a longstanding budget-export process into Deltek Vantagepoint's planning module, replacing a recurring manual workflow maintained by successive CFOs for more than 20 years.
- **Enterprise integrations:** Design and maintain employee and project data integrations across UKG UltiPro, Microsoft Entra ID, Deltek Vantagepoint, DataBasics, Unanet, and internal applications using APIs, scheduled database queries, and runtime SQL.
- **Python automation:** Built and maintain a production automation process that retrieves third-party survey data and generates Word reports; the process has been running for approximately two years.
- **Modern application engineering:** Develop full-stack applications in a Next.js/Turborepo monorepo, using Vitest for automated testing. Handle complex implementation work, establish shared standards, and coordinate module ownership across the development team.
- **Production reliability and security:** Investigate root causes across frontend, backend, databases, and integrations. Maintain GitHub pull-request workflows, automated CI/CD, development and staging environments, and additional testing and approval gates for selected critical applications.
- **Documentation and knowledge transfer:** Create system documentation, user-flow diagrams, workflows, automation diagrams, and business-process maps to improve maintainability and help new developers contribute effectively.

#### Senior Web Developer

August 2021 - December 2022

- Designed, developed, and maintained full-stack enterprise applications, taking ownership of frontend interfaces, backend services, database logic, and system integrations.
- Made technical architecture and technology-stack decisions while collaborating directly with business stakeholders to translate requirements into production applications.
- Delivered application enhancements and supported production systems, progressively assuming broader technical ownership ahead of promotion to management.

### Web Developer

March 2014 - September 2021

- Developed and maintained enterprise web applications and internal business systems using JavaScript, CFML, SQL, HTML, and CSS.
- Integrated third-party services and enterprise systems to automate workflows and support business operations.
- Collaborated with Accounting, Operations, IT, Marketing, and other end users to gather requirements and deliver practical software solutions.

## Nikken International, Inc.

August 2006 - April 2014

Irvine, California

### Web Developer

August 2008 - April 2014

- **International e-commerce:** Served as sole developer for an international e-commerce platform supporting more than 60 products across three countries. Built the Angular frontend and CFML backend, including payment processing, database integration, order tracking, purchase history, and deployment.
- **Consultant attribution:** Implemented customer-to-consultant assignment and personalized referral-link workflows supporting the company's multilevel marketing business model.
- **Multilingual applications:** Delivered English, Spanish, and French experiences for international customers and consultants.
- **Consultant business portal:** Independently developed and maintained MyNikken.com, a business portal featuring business reports, customer history, resources, event planning, and awards and recognition, using ASP.NET and custom HTML, CSS, and JavaScript.
- Worked with the IT Director and assistant to gather requirements and translate business needs into production applications running on company-managed infrastructure.

### Web Designer

August 2006 - August 2008

- Designed and maintained websites and interactive web experiences in collaboration with IT and Marketing, building the foundation for progression into full-stack application development.

## TECHNICAL SKILLS

| | |
|---|---|
| **Languages** | JavaScript, TypeScript, SQL, Python (automation), CFML, BoxLang |
| **Frameworks & UI** | Next.js, React, Angular, AngularJS, ColdBox, Telerik UI, HTML5, CSS3 |
| **Integration & Data** | REST APIs, third-party API integration, Microsoft SQL Server, complex SQL queries, stored procedures, Redis distributed caching, data transformation, workflow automation |
| **Cloud & DevOps** | Microsoft Azure, Azure Blob Storage, Azure WAF, containerized applications, Amazon S3, GitHub, CI/CD, pull-request workflows |
| **Testing & Troubleshooting** | Vitest, automated testing, root-cause analysis, production debugging, integration troubleshooting, security testing coordination |
| **Design & Documentation** | System architecture, user-flow and workflow diagrams, automation diagrams, business-process mapping, developer documentation; Microsoft Visio, Balsamiq, Excalidraw |

## EDUCATION & PROFESSIONAL DEVELOPMENT

### Self-directed study in Web Design & Programming

2002 - 2006

Extensive hands-on professional experience developing and supporting production software, enterprise integrations, and business-critical applications.

## EXPERIENCING

- **AI-Powered Business Data Assistant:** Experimenting with the user experience of an AI chat assistant connected to enterprise business data through Model Context Protocol (MCP) connectors. Exploring how conversational interfaces can make business information more accessible and enable users to interact with complex data through natural language. Testing a suite of data mcp connectors in Claude live dashboard artifacts.
- **Generative UI & Interactive AI:** Experimenting with AI chat interfaces that generate and render UI components dynamically within the same browser experience. Exploring conversational interactions that produce contextual, interactive interfaces in real time, moving beyond traditional text-only AI responses.
